

CARA on Documentum Automatic tagging of images

Automatically tag images including on import

When images are imported, or a user selects to tag an image, CARA can call a number of image tagging engines in order to automatically extract information relating to the image and add it to a configured attribute(s) on Documentum.

The screenshot shows the Documentum user interface. The main area displays a grid of image thumbnails with captions: "race night 3", "Penguin", "Lighthouse", "Koala", and "IMG_0120". A context menu is open over the "Penguin" image, with the "Detect image" option highlighted. To the right, the "Widgets" panel shows the "Properties" widget with the following data:

Property	Value
Name	Penguins
Keywords	bird, flightless bird, penguin, snow

Arrows indicate the flow of information: one arrow points from the "Detect image" menu item to the "Properties" widget, and another points from the "Properties" widget to the "Penguin" image.
